

Monitor dashcam faults across your fleet

See current device faults alongside your existing dashcam health information

THE OPPORTUNITY

For safety-focused fleets, it is essential to know that every dashcam is working as expected, so footage is available when it matters most.

WHAT'S NEW

The Dashcam Health and Management page now includes a dedicated Current Device Faults field. From **Admin > Dashcams**, you can view reported device faults alongside existing information including connection status, installation status, plan type and last event snapshot.

WHY IT MATTERS

- > Identify device issues sooner across your fleet
- > Resolve faults quickly to help minimise gaps in safety coverage
- > Maintain confidence that your devices are ready to record when needed

Available now in Dashcam health. No action required.

HOW IT WORKS

1. Go to **Admin > Dashcams**
2. View the **Current Device Faults** field for each Clarity Edge device
3. Identify and follow up on devices reporting a fault
