

Clear false-positive safety events faster

New Dismiss Events workflow in Replay

THE CHALLENGE

False-positive events create unnecessary review work and make it harder for safety teams to focus on genuine risk.

WHAT'S NEW

EROAD Replay now gives users a streamlined way to dismiss an event, select a reason, and automatically keep dismissed events out of the default list view.

WHY IT MATTERS

- > Reduce manual review effort with a faster dismissal workflow
- > Keep event queues cleaner by removing dismissed events from the default view
- > Focus safety attention on genuine risk rather than false positives

Available now in Replay. No action required - your team can begin using the new workflow today.

HOW IT WORKS

1. Select Dismiss event
2. Choose a reason

YOU CAN ALSO

1. Review dismissed events using the filter
2. Bulk dismiss similar events
3. Restore incorrectly dismissed events
