

Speed limit updates, delivered sooner

More accurate speed zones, fewer false alerts

THE CHALLENGE

When speed-zones change and information is out of date, the Ehubo can display an incorrect posted speed limit – and deliver overspeed alerts that are confusing and frustrating for your drivers.

WHAT'S NEW

From 14 September, speed zone data on Ehubo devices will refresh every two weeks rather than every quarter. This means recent speed-limit changes will be reflected sooner in posted speed display and drivers will see fewer false overspeed alerts.

WHY IT MATTERS

- > More current posted speed information
- > Reduce driver frustration from false overspeed alerts

No action required – updates will be rolled out to all Ehubo devices automatically.
