EROAD

SAFETY & RISK MANAGEMENT

Customer-ready | Released: **Oct 2026**

Platform: **MyEROAD**, **Core360** | Availability: All markets

Hardware: Clarity dashcam, Clarity Edge

More context for event review

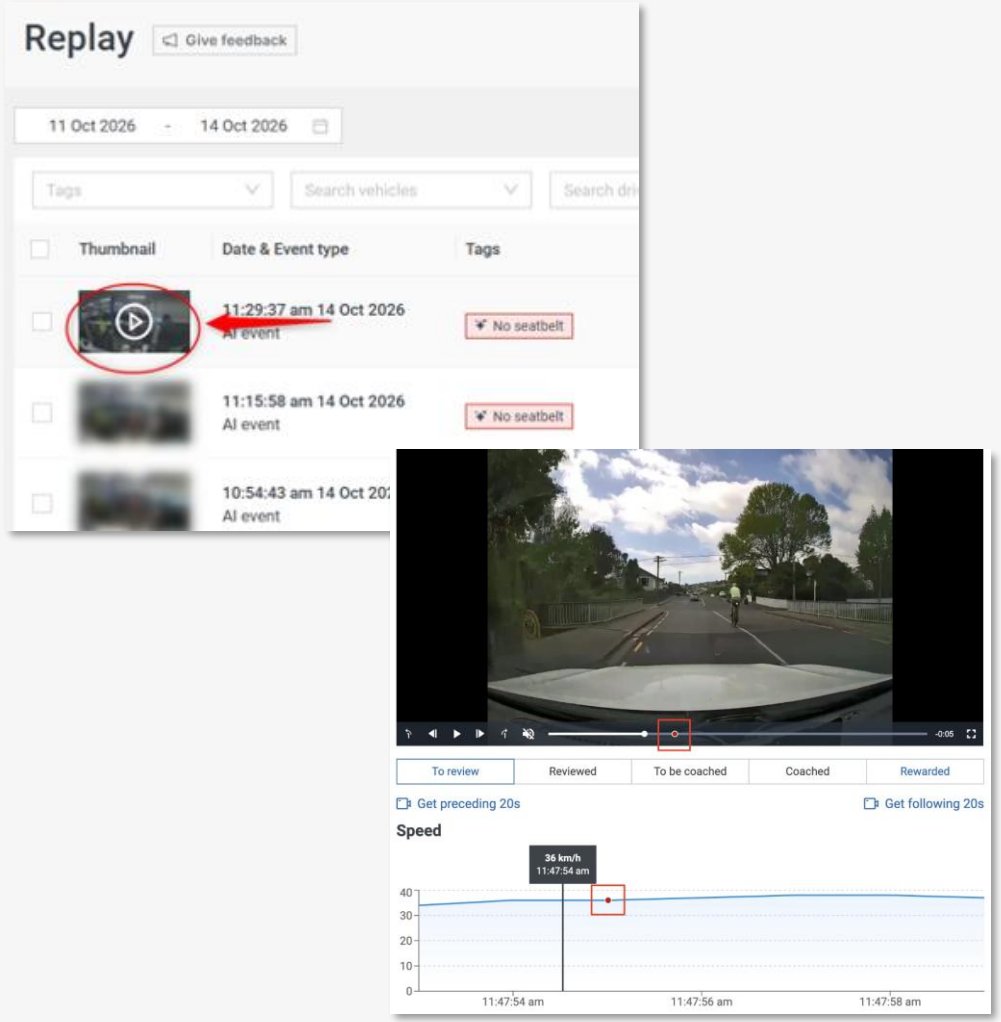

Several Replay improvements make it easier to find and review video events.

THE OPPORTUNITY

When reviewing video events, you need to be able to quickly and easily find important information, reference it and review critical events – without navigating between multiple screens.

WHAT'S NEW

1. **Preview video from the Replay list** — review footage from the event thumbnail before opening the full event page
2. **Interactive speed graph** — see exactly when an event was detected and select any point in the graph to jump to that moment in the footage
3. **Vehicle Group visibility** — view the groups assigned to a vehicle directly in the event details panel
4. **Recent notes in Replay exports** — a new Notes (3 Most Recent) column brings recent manual and system-generated notes into the export

WHY IT MATTERS

> Review and identify priority events with fewer clicks

> Investigate what happened before and after an event more easily

> Access the context your team needs without navigating between screens.
