SAFETY & RISK MANAGEMENT

More reliable fatigue alerts

Customer-ready | Released: **Nov 2026**

Platform: **MyEROAD**, **Core360** | Availability: All markets

Hardware: Clarity Edge Fatigue camera

Updated AI detection helps distinguish routine glances from genuine fatigue.

THE OPPORTUNITY

Drivers and safety teams need fatigue alerts they can trust, so they can focus attention on events that need follow-up.

WHAT'S NEW

We've enhanced Clarity Edge fatigue detection using real-world driving scenarios and customer feedback.

The updated AI model is better able to distinguish a brief, routine glance down – such as checking the dashboard or using in-cab controls – from behaviours that may indicate genuine fatigue.

WHY IT MATTERS

> Give drivers and safety teams greater confidence in fatigue alerts

> Help reduce unnecessary event review

Delivered automatically to Clarity Edge Fatigue cameras in November. No action required.
