# The Hidden Costs of Keeping a Ready-Mix Fleet Moving

## Your fleet's true cost.

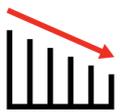

Each heavy vehicle costs \$150K-\$500K upfront. But the real expense? Downtime and repairs. The industry spends over \$24B a year on maintenance alone.

## How downtime drains your bottom line

### Project delays

Missed deadlines can cause penalties and lost opportunities

### Lost productivity

Idle workers and stalled workflows drain resources

### Compliance risks

Rushed maintenance creates safety violations

### Parts delays

Supply chain issues extend downtime for weeks

### Fuel waste

Poorly maintained vehicles consume excess fuel

**Fact: maintenance can exceed \$70,000 per vehicle.**

## The solution: smart prevention through telematics

### Preventative maintenance

- Catch small issues before they become costly breakdowns
- Schedule service between jobs to minimize disruption
- Extend equipment lifespan through regular care

### Real-time engine monitoring

- Track fault codes and diagnostics
- Optimize emissions through fuel usage tracking
- Capture comprehensive data on vehicle performance

### Digital Vehicle Inspection Reports (DVIRs)

- Streamline pre/post-trip safety checks
- Report issues instantly to maintenance teams
- Identify required repairs and maintenance needs immediately

**Downtime hurts your bottom line. CoreHub helps you stop it**
